Streamlining Legal Processes: Leveraging FIR Management Systems to **Optimize IPC Section Recommendations** Team Name :- Legal Shield Squad

Introduction

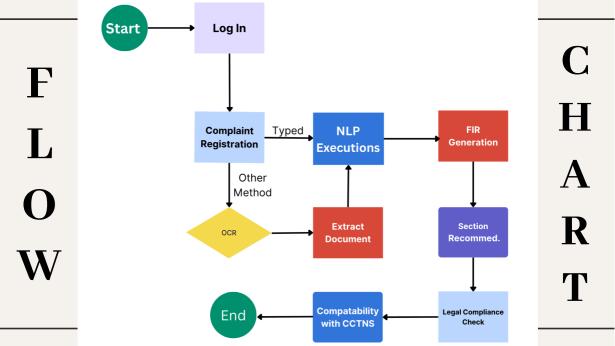

Welcome to the presentation on *Streamlining FIR Filling Process*.

In the upcoming slides we will have a glance of our web application which makes FIR filling online and will help recommend the sections applicable automatically online.

Understanding Our FIR Management Systems

In Brief, We have designed our Application in such a way that user will register his or her complaint in any format they want and after that registration our application will tell the user as well as the admin the applicable IPC sections.

UNDERSTANDING PROCESS

Step 1:-First of all our application uses a web interface which allows two types of logins one is Admin Login And other is User Login to differentiate the process. Although a new user have to sign up when using the first time.

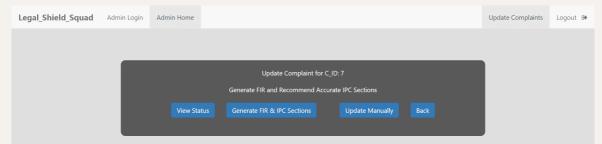

Step 2: After making a Login id, One have to login with the credentials and than the complaint can be registered giving the demanding information.

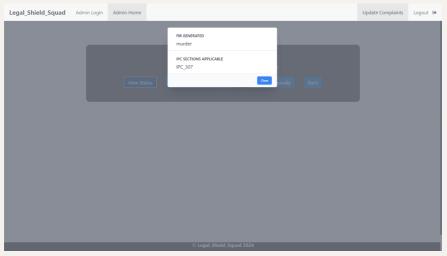

Moreover, what extra we have done that the description of the complaint can be given in different languages and with different methods such as using picture to text method or using voice to text method etc.

<u>Step 3</u>:- After the giving the description, one have to submit the complaint and this complaint will be assigned to the admin user and when the admin will open his id at that time, they will see the complaint and with just one click they can generate Fir along with recommendation of valid IPC Section.

Step 4:- And after savig it, it will be updated and this updation can be viewed by user also.

<u>Integration of Technology in Legal</u> <u>Practices</u>

Integrating technology with this manual FIR filing system will ultimately decrease the error in the process and will make the process efficient and swift.

<u>Future Trends and Developments</u>

- Firstly, Future upgradation include that at present our application is only telling the IPC section with regards to the Registered complaint but we want to upgrade it in such a way that all the progress of the complaint must be updated on it till the closure of the complaint.
- At present the complaint is being stored in the common Admin id specified in the code but in future we will update it in such a way that the complaint must go to the Admin id of the selected district of the complaint.

Conclusion

In conclusion, leveraging FIR Management Systems to optimize *IPC Section Recommendations* offers significant potential for streamlining legal processes and improving overall efficiency in the legal system.

Thank you!
